FOR IMMEDIATE RELEASE
April 9, 2018

CONTOUR DESIGN RELEASES WIRELESS VERSIONS OF THEIR ERGONOMIC MICE ROLLERMOUSE RED AND RED PLUS

**Completing the range of ergonomic central pointing devices Contour Design is
now able to deliver true freedom of movement to its customers.**

Ballerup, Denmark, 1BApril 9, 2018 – Contour RollerMouse Red Wireless and RollerMouse Red plus Wireless are both based on the renowned RollerMouse Red product that was awarded the Red-dot award upon its first release in 2013. The metal casing and sleek design was popular then and still is. Not only are the RollerMouse Red Wireless and Red plus Wireless products based on the market leading RollerMouse Red technology, but they also feature a wireless connection which makes them a perfect choice for any customer who wants the market leading ergonomic mouse as well as the possibility to take the ergonomic mouse with them, giving true freedom of movement.

Since the launch of our first ergonomic mice, we have been a market leader in the field. RollerMouse Red, our award-winning ergonomic computer mouse, is the result of many years of targeted research, development and design. With the release of RollerMouse Red Wireless and Red plus Wireless we complete our range and are able to deliver true freedom of movement to our customers.
– says Kenneth Schach, Managing Director, Contour Design Nordic

Over the years Contour Design has been able to shift the perception of the ergonomic mouse, from a device for the few to a device for everyone who wants to prevent injury resulting from working at a computer. It is therefore no longer solely a question of treating symptoms, but of a desire for greater energy and efficiency in the working day, that drives investment in ergonomic mice. For this reason, we develop a range of mouse solutions that accommodate most users' needs for an ergonomically sound workstation.
